<b>Foreword</b>	<b>xiii</b>
<b>Preface</b>	<b>xv</b>
<b>Author biographies</b>	<b>xix</b>
<b>Introduction</b>	<b>xxv</b>
<b>1 Human factors and cost benefits</b>	<b>1</b>
<i>Roger S. Harvey</i>	
1.1 Introduction	1
1.2 Human factors or ergonomics?	2
1.3 Human-centred design and systems engineering	3
1.4 Human factors costs and pay-offs	6
1.5 References	9
<b>2 Human factors integration</b>	<b>11</b>
<i>Michael A. Tainsh</i>	
2.1 Background to HFI prior to the mid 1980s	11
2.2 Post mid 1980s	12
2.3 Scope of application of HFI	13
2.3.1 Application areas	13
2.3.2 Customer and supplier	14
2.4 Life cycle management and risk	14
2.4.1 Smart acquisition within the MoD	14
2.4.2 Acquisition and design outside the MoD	15
2.4.3 Design drivers	15
2.4.4 Managing risk	15
2.4.5 The applicability of the approach	16
2.5 Starting an HFI programme	16
2.5.1 The stages of the life cycle	16
2.5.2 Technical processes of ISO 15288	18
2.5.3 Concept	18

vi *Contents*

2.5.4	Development	20
2.5.5	Production	24
2.5.6	Utilisation	25
2.5.7	Support	26
2.5.8	Retirement	26
2.6	Early human factors analyses	26
2.7	The future	28
2.7.1	Assessment of progress within the MoD on new projects	28
2.7.2	Projects in ‘utilisation’	31
2.8	Conclusions	32
2.9	References	32
<b>3</b>	<b>Humans: skills, capabilities and limitations</b>	<b>35</b>
	<i>Jan Noyes, Kate Garland and Daniel Bruneau</i>	
3.1	Introduction	35
3.2	Humans as information processors	35
3.3	Models of information processing	36
3.4	Sensations	38
3.5	Perception	39
3.6	Attention	41
3.7	Memory	44
3.8	Higher order processing	45
3.9	Action	50
3.10	When information processing goes wrong	51
3.11	Implications for design	52
3.12	Conclusions	53
3.13	References	54
<b>4</b>	<b>The human factors toolkit</b>	<b>57</b>
	<i>Jan Noyes</i>	
4.1	Introduction	57
4.2	The human factors approach	60
4.3	Methods for assessment	60
4.4	Human factors tools	61
4.4.1	Subjective methods	61
4.4.2	Objective methods	63
4.4.3	Empirical methods	66
4.5	Which method to use?	71
4.6	Exercises	73
4.6.1	Exercise 1: heuristic evaluation	73
4.6.2	Exercise 2: checklists	74
4.7	Acknowledgements	75
4.8	References	75

<b>5</b>	<b>Task analysis</b>	<b>81</b>
	<i>Leslie K. Ainsworth</i>	
5.1	Introduction	81
5.2	Data collection for task analysis	83
5.2.1	Existing documentation	83
5.2.2	Interface inspection	84
5.2.3	Subjective assessment	84
5.2.4	Task observations	85
5.3	Hierarchical Task Analysis (HTA)	86
5.3.1	The redescription process	86
5.3.2	Stopping rules	88
5.3.3	Plans	88
5.3.4	Presentation of HTA information	89
5.4	Task decomposition	91
5.4.1	Types of decomposition information	92
5.4.2	Collection of task decomposition data	93
5.5	Data analysis	93
5.5.1	Introduction	93
5.5.2	Analysis of the working environment	94
5.5.3	Analysis of the workstation design	95
5.5.4	Analysis of information requirements	95
5.5.5	Analysis of task sequence	97
5.5.6	Analysis of temporal and workload issues	99
5.5.7	Analysis of errors	103
5.5.8	Analysis of cognitive processes	106
5.6	Reporting task analysis	108
5.7	Exercises	109
5.8	Answers	109
5.9	References	111
<b>6</b>	<b>Automation and human work</b>	<b>113</b>
	<i>Erik Hollnagel</i>	
6.1	Introduction	113
6.1.1	Precision and stability	114
6.1.2	Automation as compensation	115
6.1.3	The self-reinforcing loop	116
6.1.4	Humans as a liability or as a resource	118
6.2	Humans and automation	119
6.2.1	The 'left-over' principle	120
6.2.2	The compensatory principle	121
6.2.3	The complementarity principle	123
6.2.4	From function allocation to human-machine co-operation	124
6.2.5	Unwanted consequences of automation	126

viii *Contents*

6.3	Cognitive systems engineering	127
6.3.1	Balancing functions and responsibilities	128
6.3.2	The ironies of automation	130
6.3.3	Automation as a socio-technical problem	132
6.4	Exercises	133
6.5	References	134
<b>7</b>	<b>To engineer is to err</b>	<b>137</b>
	<i>Sidney Dekker</i>	
7.1	Humans degrade basically safe systems. Or do they?	137
7.2	Human error or mechanical failure?	140
7.3	Why don't they just follow the procedures?	142
7.4	Automation as a solution to the human error problem?	146
7.5	Unknowable futures and irreconcilable constraints	148
7.6	References	149
<b>8</b>	<b>Qualitative and quantitative evaluation of human error in risk assessment</b>	<b>151</b>
	<i>David Embrey</i>	
8.1	Introduction	151
8.2	Human reliability analysis in risk assessment	152
8.2.1	Introduction to the risk analysis process	152
8.2.2	Modelling tools used in risk analysis	153
8.3	A systematic human interaction reliability assessment methodology (HIRAM)	157
8.4	Criticality analysis	159
8.4.1	Developing the task inventory	159
8.4.2	Screening the tasks	160
8.4.3	Developing a screening index	161
8.5	Qualitative human error analysis	162
8.5.1	Task analysis	162
8.5.2	Predictive human error analysis	162
8.5.3	Case study illustrating qualitative analysis methods in HIRAM	164
8.6	Representation of the failure model	169
8.7	Quantification	172
8.7.1	The quantification process	173
8.7.2	Overview of quantitative human error probability assessment techniques	175
8.7.3	Database approaches: technique for human error rate prediction (THERP)	176
8.7.4	Human error assessment and reduction technique (HEART)	180
8.7.5	The success likelihood index method (SLIM)	186
8.7.6	The influence diagram evaluation and assessment system (IDEAS)	192

8.8	Choice of techniques	197
8.8.1	Evaluation criteria	198
8.8.2	Evaluation of the reviewed methods against the criteria	199
8.9	Summary	201
8.10	References	201
<b>9</b>	<b>Control room design</b>	<b>203</b>
	<i>John Wood</i>	
9.1	The human operator in the control loop	203
9.2	The control room design process	206
9.2.1	Phase 1: establishing the brief	206
9.2.2	Phase 2: analysis	207
9.2.3	Phase 3: concept design	208
9.2.4	Phase 4: detailed design	208
9.2.5	Phase 5: implementation	208
9.2.6	Phase 6: evaluation	209
9.3	The control suite and its layout	210
9.4	The layout of control rooms	212
9.4.1	General principles for control room layout	213
9.5	Workstation layout principles and workstation design	219
9.5.1	Workstation design process	220
9.5.2	General design considerations	223
9.6	Control room interface design (HCI)	224
9.6.1	Principles for control room HCI design	224
9.6.2	Overview displays	225
9.7	Environmental design of control rooms	226
9.7.1	General principles	227
9.7.2	Interior design considerations	230
9.8	References	233
<b>10</b>	<b>Human–computer interfaces: a principled approach to design</b>	<b>235</b>
	<i>Robert D. Macredie and Jane Coughlan</i>	
10.1	Introduction	235
10.2	Interfaces: a story about design	235
10.2.1	Background to interface design	236
10.2.2	The interface defined	236
10.2.3	User requirements	237
10.2.4	Interface models	238
10.2.5	Scope of the chapter	238
10.3	Key topic areas	239
10.3.1	Human factors	240
10.3.2	Interface types	240
10.3.3	Interface design principles	241
10.4	Design cases	243
10.4.1	The ticket machine interface	244

x *Contents*

10.4.2	'Good morning, could I have a return ticket to Leytonstone, please?'	245
10.4.3	The point-of-sale machine interface	248
10.4.4	'Hi, I would like some information on the mortgage deals you have available, please'	248
10.5	Conclusions	252
10.6	References	253
<b>11</b>	<b>Usability</b>	<b>257</b>
	<i>Martin Maguire</i>	
11.1	Introduction	257
11.1.1	Definition of usability	257
11.1.2	Usability benefits	258
11.2	Usability perspectives and role in system development	258
11.3	Scoping, planning and context of use	260
11.3.1	Usability scoping and planning	260
11.3.2	Context of use analysis	260
11.4	Formative usability – enhancing usability within design	263
11.4.1	Usability design principles	263
11.4.2	Rapid prototyping	266
11.4.3	Expert and user evaluation of prototype	268
11.5	Summative usability – usability in terms of user experience	271
11.5.1	Usage scenarios and success criteria	271
11.5.2	Usability measurement	272
11.6	User audit of implemented system	276
11.7	Examples of usability projects	276
11.7.1	Expert evaluation of training opportunities software (formative)	277
11.7.2	Re-design of intranet site (formative)	277
11.7.3	Evaluation of a forest monitoring system (formative and summative)	278
11.7.4	Application of the CIF to e-shopping (summative)	279
11.7.5	User-centred design at IAI	280
11.7.6	Evaluation of home products (formative and summative)	280
11.7.7	Evaluation of financial systems (summative)	281
11.7.8	Evaluation of scientific search engine (summative)	281
11.7.9	Evaluation of electronic programme guide (EPG)	282
11.8	Conclusions	283
11.9	References	283
<b>12</b>	<b>HF verification and validation (V&amp;V)</b>	<b>287</b>
	<i>Iain S. MacLeod</i>	
12.1	Introduction	287
12.1.1	Fitness for purpose (FfP)	289

12.2	Background	289
12.2.1	Limitations of HF discipline	290
12.2.2	Consideration of trade offs within assist human factor integration	291
12.2.3	Limitations in system manufacturing capabilities	292
12.3	Systems, V&V and human factors	292
12.3.1	Issues with HF V&V	293
12.3.2	Influences of technology	295
12.4	HF V&V relationship to system-related human functions and responsibilities	296
12.4.1	Roles and stakeholders	296
12.4.2	Forms of system development models	299
12.5	Pertinence of HF V&V activities within a system's life cycle	301
12.6	Detail on HF V&V activities throughout a system's life cycle	302
12.6.1	HF V&V and task analysis (TA)	303
12.6.2	Use of modelling, prototyping and simulation	305
12.6.3	Suggested actions and reporting	307
12.6.4	Test and evaluation (T&E)	308
12.6.5	Consideration on measures	309
12.6.6	Ancillary issues affecting HF V&V	311
12.7	Evidence of the consequences of absent HF application within system V&V	312
12.8	Summary and conclusions	313
12.9	Questions	314
12.10	References	315
<b>13</b>	<b>The application of simulators in systems evaluation</b>	<b>317</b>
	<i>Ed Marshall</i>	
13.1	Background	317
13.1.1	Simulators and simulation	317
13.1.2	History	318
13.1.3	The exploration of extreme situations	319
13.2	What can the simulator do?	320
13.2.1	Fidelity	320
13.2.2	Simulator scenarios	322
13.2.3	Simulator data	323
13.2.4	Objective data from the simulator	323
13.2.5	Objective data on operator performance	324
13.2.6	Subjective data from the participants	324
13.2.7	Subjective data from the experimenters	324
13.3	The participants	324
13.3.1	Investigation without participants	325
13.3.2	Investigation using single participants or teams	325
13.3.3	Investigation using trainees or students	325

xii *Contents*

13.4	Observation in the simulator	326
13.4.1	Observer location	326
13.4.2	On-line observation	326
13.4.3	The use of video and audio recordings	327
13.5	The simulator session	327
13.5.1	The preparation and pre-briefing	327
13.5.2	Familiarisation	328
13.5.3	The scenario	328
13.5.4	Debrief	328
13.6	Pitfalls	329
13.6.1	The simulator itself	329
13.6.2	Participants	329
13.6.3	The data	329
13.6.4	The participants' performance	330
13.7	Conclusions	330
